

STRONG ALL-ROUNDER Starvac MI55

With the new Starvac MI55 vacuum cleaner, WOLFF complements its range with a compact and powerful wet and dry vacuum cleaner.

Feature highlights include the patented fully automatic filter cleaning.

This enables the user to suck up large amounts of fine dust particles without having to stop at any point, resulting in a significant increase in productivity.

If liquids or coarse dirt particles are sucked up, the system can be deactivated without any problems.

The vacuum cleaner also has a variable speed control, which can be used to individually adjust the cleaning power of the tools to the different

#60800

requirements when using various power tools.

The completely electrically conductive system as well as other elements not depicted, such as wheels, suction hose and a highly flexible electric cable, make the Starvac MI55 the perfect vacuum cleaner for floor and parquet layers.

INNOVATION WITH QUALITY WOLFF Wallmaster System

The WOLFF Wallmaster is a new specialist tool in the WOLFF range.

The tool is suitable for raising floor coverings up a wall to form a skirting and for forming a trough. Its special shape gives it multiple functions, which come into use when installing PVC floor coverings with an overlap: marking the height of skirting boards; cutting the mitre joints in the inner and outer corners; and neatly levelling

and pressing down flooring coverings in corner regions without the risk of piercing the floor covering.

The ruler, which is compatible with the WOLFF Wallmaster (#61394) comple-

The perfect team: Wallmaster #60890 and ruler #61394

ments this function for longer sections of wall. Because of its special properties, the Wallmaster is patent pending. The WOLFF Wallmaster is recommended by UZIN and Tarkett.

READY AND ABLE

Visit WOLFF at Domotex 2011 and Bau 2011

After a year's break, this year WOLFF will be exhibiting at both of the year's important trade fairs at the same time.

With its motto „The world of floor coverings“, the Domotex trade show will be held at the Hanover exhibition centre from 15th to 18th January 2011. Here, WOLFF will appear together with its sister brand RZ (cleaning and care systems for all types of floor coverings) in Hall 7, Stand A55.

Virtually at the same time, the Bau 2011 trade show will be taking place at the Munich exhibition centre from 17th to 22nd January 2011.

The world's leading trade fair for architecture, materials and systems, its theme this year will be „The future of construction“. Here you will be able to find WOLFF, along with all other brands

of the UFLOOR Systems group, in Hall A4, Stand 502.

We look forward to your visit!

ADVANCED TRAINING WITH WOLFF

New training room at the WOLFF site in Vaihingen / Enz

Following extensive renovation work, we are pleased to be able to open our new training room at the WOLFF site in Vaihingen / Enz.

Finished entirely in WOLFF colours, it

provides space for training groups of up to 30 people and is equipped with all the latest advanced technology. The theoretical section will take place in the room itself, and practical examples will be demonstrated in the testing area. Training at WOLFF is gladly pro-

vided on request. If you and your team are interested in WOLFF training, please contact your relevant field representative, or contact: Mrs Julia Danner (julia.danner@uzin-utz.com) directly.

ALL-ROUND CAREFREE KIT Design Collection

#55035

With the tried-and-tested **WOLFF** tools **Linocut**, **FasTrimmer**, **Duo pressure roller** and **mitre-box scissors** for luxury floor coverings, the **Wolff Design Collection** offers a packaged range of services as never seen before for the technically perfect installation of luxury floor coverings.

All of the tools have a very robust construction and allow work to be carried out comfortably and safely, making them as good as tailor-made for this area.

The original **Linocut** cuts perfect joints in all resilient floor coverings and needle punch carpet. It cuts the upper sheet edge, using the lower one as a guide. It can be used in various ways using different approaches.

Straight lines can be cut easily without a ruler and from wall to wall. With two

blades, it is possible to cut in both directions, and the width of the joint can also be adjusted. The **Linocut** works directly in the adhesive bed.

The **FasTrimmer** enables quick and safe trimming of fibres which are left as a result of cutting the floor covering. The **Duo pressure roller** guarantees firm pressing of the joint, because if necessary the entire weight of the user can be transmitted to the roller thanks to its ergonomic shape.

Finally, the **mitre-box scissors** are the ideal device for a neat cut which is easy to achieve for small corners of the floor covering, such as along mitre joints around doors.

Wolff therefore gives users a practical collection of all the necessary tools for success for the skilled installation of luxury floor coverings.

DISTINCTION

WOLFF certified according to ISO 9001

In August, **WOLFF**, at the **Vaihingen / Enz** site, and **Frank**, at the **Oberdingen** site, were awarded certification according to the quality management system **ISO 9001:2008**.

By introducing quality management, **WOLFF** has made a strategic decision for its organisation and set the goals of quality assurance and optimisation of internal processes. The intention of this is in particular to meet the expectations of customers, employees,

investors, suppliers and the organisation. General requirements for quality management include performing all of the crucial processes in the organisation without any errors and according to specific rules, using the system as a tool in the day-to-day business, and thus ensuring continuous improvement.

The processes at **WOLFF** will now be checked once every year by an external audit.

PROFESSIONALS IN OUR MIDST Our technicians working for you

In addition to our seasoned **WOLFF** sales representatives, our technicians are also on hand to provide support for questions about the **WOLFF** range. Your point of contact for the north of Germany and northern Europe is **Frank Wehrmann**. The skilled interior decorator has been able to gather professional experience in the industry for many years and has worked for the **WOLFF** brand since 2008. An all-rounder, he is most at home working with our material.

Björn-Marcus Risch is new to the **WOLFF** team. A skilled master wood-

flooring layer, he has been working as a technician in the south of Germany since August of this year.

He is also responsible for the countries of southern Europe. Mr **Risch** will be based in **Vaihingen** and will support the daily work in construction and development. His area of responsibility will include on-site customer training.

THE NEXT GENERATION AT WOLFF

At the beginning of the training programme on 01/09/2010, three new trainees began their training with **WOLFF**:

Lauren Pris is studying a three-and-a-half year course to become a precision engineer in the field of mechanical engineering, and **Richard Kelb** will train over the next two years to become a machine and plant operator. Both training courses have a focus on milling,

turning, **CNC**, pneumatics and hydraulics. **Bünyamin Ismailoglu** is following a two-year training course to become a warehouse operator, covering the topics of acceptance, storage, commissioning, packaging and dispatch. This dual training course takes places alternately in the vocational college and at the **Vaihingen / Enz** site.

We wish all three trainees every success!
